Today’s Mission

01

Quick Intro to Copilot Chat

What it is, what’s new, and the GCSE prompting framework

02

See What You Already Have

Copilot Chat capabilities available to you right now

03

Nine Demos

Real IT scenarios — scripting, troubleshooting, security & more

04

Tips & Tricks the Pros Use

Power-user secrets that save real time

The Numbers Don’t Lie

Microsoft Work Trend Index

1.2 hrs

Saved per person
per day

70%

Faster
first drafts

4x

Faster
data analysis

85%

Say it helps them
get to a good first draft

That’s 6+ hours per week back in every IT team member’s schedule.

What is Copilot Chat?

The Free Version — Already Yours

- Free with any **Microsoft 365** subscription
- Now powered by GPT-5 with Smart Mode
- Access at https://m365.cloud.microsoft
- Web search and real-time information
- Upload files, images, and code
- **Enterprise Data Protection built in**
- *Outlook inbox & calendar included — no files or Teams*

Think of it as your
AI-powered IT sidekick

No setup. No license. No excuses.

What’s New in Copilot Chat

Live

GPT-5 with Smart Mode

Dynamic routing — quick answers or deep reasoning, automatically

Live

Memory & Work IQ

Copilot remembers your preferences and working style

Live

In-App in Word, Excel, PPT

Copilot Chat side pane embedded in Office apps

Licensed

Edit in Copilot

Specialized agents for Word, Excel, PowerPoint tasks

Licensed

Video Meeting Recaps

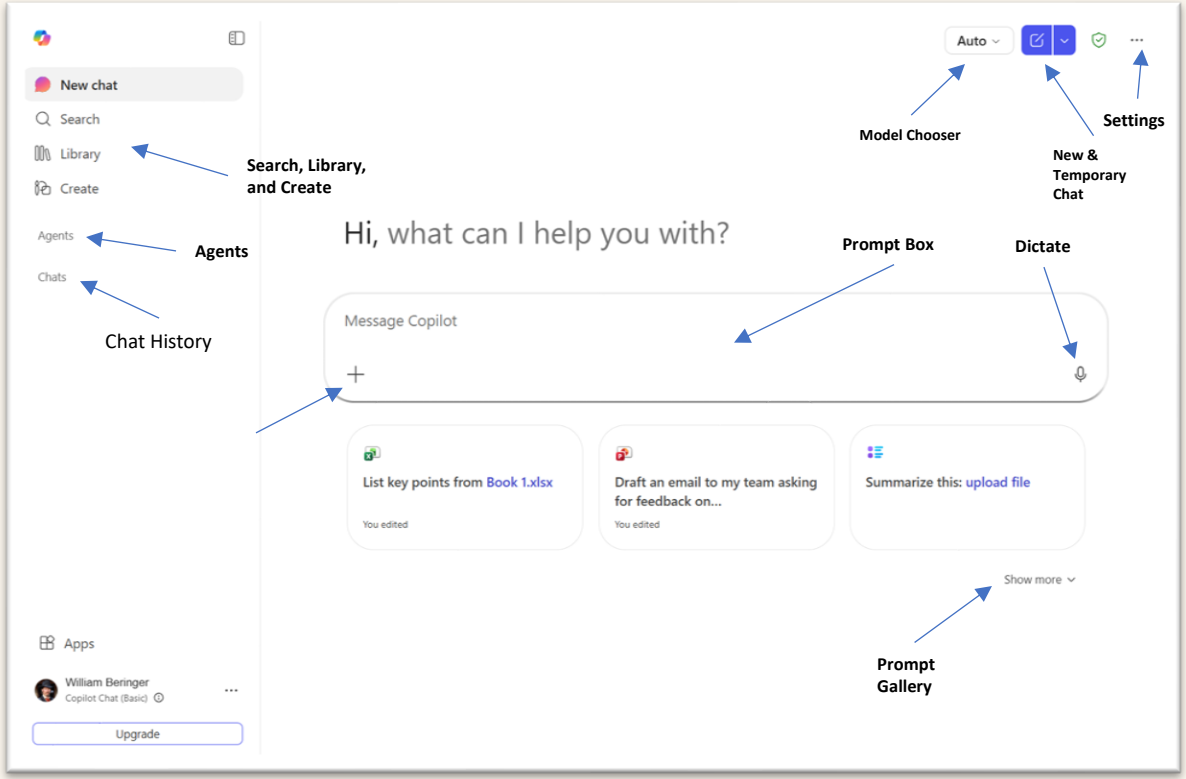
Narrated highlight reels from recorded meetings

Apr 15 2026

In-App Access Changes

In-app Copilot for unlicensed users being adjusted — web app always available

Know Your Interface



Add Content

Upload up to 3 files at a time (50 MB each, PDF/DOCX/XLSX/PPTX/CSV/JSON/LOG/HTML)

Reference Files

Pull in specific files and recent documents

Invoke Agents

Access specialized agents like Idea Coach

Voice & Read Aloud

Dictate prompts and listen to responses

Master the GCSE Framework

The 4-part prompt structure that changes everything

G Goal

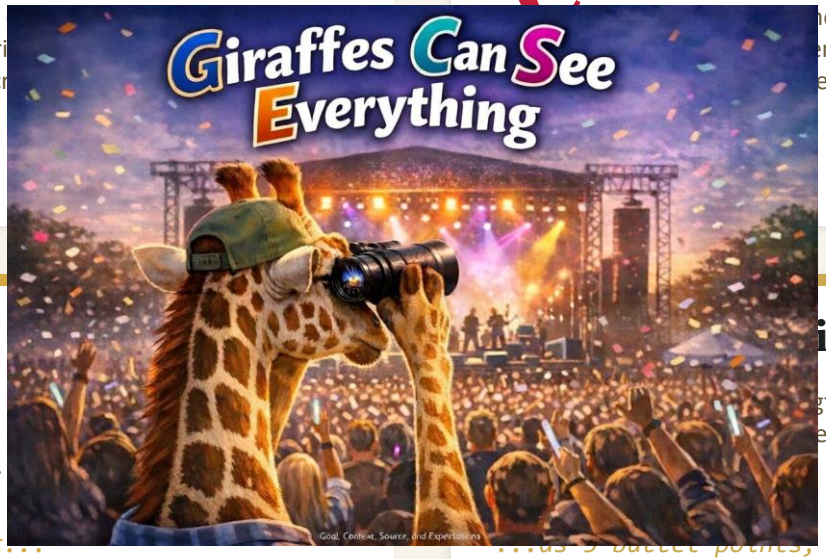
What you want Copilot to
Use action verbs: summari
draft, analyze, compare, c

"Summarize the key risks..."

C Context

elps Copilot
ence, purpose,
ess situation.

CIO..."



S Source

Where to pull data from:
a file, URL, email, Teams
channel, or uploaded doc.

"...using the attached report..."

ions

gth:
e, formal,

...as 5 bullet points, formal tone."

What You Already Have

Code Generation

PowerShell, KQL, Python,
ARM templates, Bicep

Troubleshooting

Error analysis, log parsing,
root cause identification

Documentation

Summarize, explain, and
translate technical docs

Communications

Incident reports, change
requests, team updates

Demo

Demo 1: The Script Wizard

LIVE DEMO

Scenario

Generate a PowerShell script to audit inactive Active Directory accounts older than 90 days, export to CSV, and send an email alert.

Prompts to Try

1. “Write a PowerShell script to find AD accounts inactive for 90+ days”
2. “Add error handling and logging”
3. “Now add email notification with a summary table”

Each prompt builds on the last. No more Stack Overflow rabbit holes.

With a License: Pull data from your SharePoint and emails — scripts that know your environment.

Demo 2: The Troubleshoot Master

LIVE DEMO

Scenario

Paste a cryptic Azure Resource Manager error and watch Copilot diagnose the issue, explain root cause, and provide step-by-step resolution.

Prompts to Try

1. “Explain this error: AuthorizationFailed... OperationNotAllowed...”
2. “What RBAC role do I need to fix this?”
3. “Write an Azure CLI command to assign that role”

From error to fix in under 60 seconds — no documentation hunting.

With a License: Reads your incident emails and Teams threads for context-aware diagnosis.

Demo 3: The KQL Query Builder

LIVE DEMO

Scenario

Build complex Sentinel and Log Analytics KQL queries from plain English. Go from idea to working query instantly.

Prompts to Try

1. “Write KQL to find failed sign-ins from outside the US in 24 hours”
2. “Add a chart summarization by country and hour”
3. “Now correlate with successful logins from the same IPs”

Complex KQL joins and time-series analysis — described in English, generated in seconds.

With a License: Knows your log schemas and workspace data for even more targeted queries.

Demo 4: The Security Reviewer

LIVE DEMO

Scenario

Paste a Terraform configuration and ask Copilot to review it for security issues, compliance gaps, and best practice violations.

Prompts to Try

1. “Review this Terraform config for security issues” [paste config]
2. “What CIS benchmarks does this violate?”
3. “Rewrite the NSG rules following least-privilege”

Catches misconfigurations humans might miss — and explains why each one matters.

With a License: Reviews your actual Azure configs and compliance docs from SharePoint.

Demo 5: The Incident Commander

LIVE DEMO

Scenario

Feed Copilot raw incident details and watch it produce executive summaries, customer communications, and RCA templates.

Prompts to Try

1. “Draft an incident notification for a partial outage” [paste details]
2. “Now write the customer-facing version — non-technical”
3. “Generate an RCA template with timeline and action items”

One set of facts, multiple audience-appropriate outputs — in minutes, not hours.

With a License: Auto-pulls from meeting transcripts, emails, and Teams to build the full picture.

Demo 6: The Regex Whisperer

LIVE DEMO

Scenario

Describe what you need to match in plain English and Copilot generates, explains, and tests the regex pattern for you.

Prompts to Try

1. “Write a regex to validate email addresses with subdomains”
2. “Explain each part of this regex step by step”
3. “Now modify it to also capture the domain separately”

Regex that would take 20 minutes of trial-and-error — done in seconds, with an explanation.

With a License: Scans your repo files on SharePoint and suggests regex fixes across your codebase.

Demo 7: The Bicep Builder

LIVE DEMO

Scenario

Describe your Azure infrastructure in plain English and Copilot generates production-ready Bicep templates with best practices.

Prompts to Try

1. “Write Bicep to deploy a VNet with 3 subnets and an NSG”
2. “Add a Key Vault with RBAC and a managed identity”
3. “Now add diagnostic settings that log to a Log Analytics workspace”

Bicep that follows naming conventions, uses secure defaults, and includes comments.

With a License: References your existing ARM deployments and naming standards from SharePoint.

Demo 8: The Change Request Machine

LIVE DEMO

Scenario

Feed Copilot the technical details of a change and it produces a complete change request document with risk assessment and rollback plan.

Prompts to Try

1. “Draft a change request for migrating DNS to Azure DNS”
2. “Add a risk matrix with likelihood and impact ratings”
3. “Generate a rollback plan with step-by-step instructions”

A full change request in 3 prompts — CAB-ready documentation in minutes.

With a License: Pulls previous change requests and compliance templates from SharePoint.

Demo 9: The On-Call Companion

LIVE DEMO

Scenario

Paste an alert or describe a symptom and Copilot builds a troubleshooting runbook with escalation paths and known fixes.

Prompts to Try

1. “I got a PagerDuty alert for high CPU on a production SQL server — walk me through triage”
2. “What are the top 5 causes and how do I check each one?”
3. “Draft an escalation email to the DBA team with what I’ve found so far”

From alert to structured triage in 60 seconds — even at 2 AM.

With a License: Searches your incident history in Teams and email for similar past issues.

Tips & Tricks the Pros Use

1

Start new chats for new topics*

Copilot uses conversation context. Switching topics? Start fresh for better results.

2

Assign Copilot a role*

"Act as a network engineer explaining this to a non-technical manager" gets way better results.

3

Use / to reference files

Type / in the prompt bar to pull in specific documents without leaving the app.

4

Refine, don’t just create

"Simplify this for a non-technical audience" or "Rewrite this as 5 bullet points" is powerful.

5

Build a team prompt library*

Share your best prompts with colleagues. Adoption skyrockets when prompting is a team sport.

6

Use GCSE on every prompt

Even adding one element (Context or Expectations) dramatically improves output quality.

7

Stay close to the roadmap!

Microsoft ships Copilot updates monthly. Nominate someone to track what’s new.

Copilot Custom Instructions

Thinking Style

Think deeply before responding
When uncertain, ask clarifying questions or provide 2–3 vetted options with pros/cons
Avoid cascade errors — recheck each step
Present verified facts first, then inferences with a disclaimer
Avoid presenting inferences as facts
If no source exists, state “No authoritative source found” and propose next steps

Style for Customer Audience

Professional, courteous, and reassuring
Formal greetings and closings
Avoid jargon unless contextually relevant
Provide clear next steps and timelines
Maintain professionalism, clarity, and reassurance
“Looking forward to discussing the way forward.”
“We completely understand the need to…”
“Sounds like a great opportunity.”

Source Discipline

Search enterprise content first (files, emails, chats, meetings, transcripts)
Resolve contradictions before responding
Preserve critical qualifiers in summaries
Cite specific identifiers; flag unverified claims [Unverified]
Never fabricate citations, quotes, or references
If confidence is low, outline known, unknown, and next steps
Verify jurisdiction and effective dates for legal content
Check date stamps; warn about staleness; add freshness disclaimers
If no authoritative source exists, offer to search the web
When confidence is low, search for additional sources internally and externally

Formatting

Don’t use characters like “-” when writing text
Use clear labels:
[Verified] facts from authoritative sources
[Inference] logical assumptions or context-based reasoning
[Confidence] cues (e.g., “Likely,” “Based on observed patterns”)
[Sources] section with live links or identifiers
[Glossary] acronyms used with clarification

Tone

Professional yet approachable
Action-oriented and outcome-focused
Empathetic and appreciative
Direct and clear, avoiding ambiguity
Balanced warmth: friendly without being overly informal
Collaborative and supportive; occasional humor or emojis
Quick confirmations and pragmatic language
“Thanks for sharing.” “Would it work to…” “Appreciate your support.”

Shortcuts

`#e` Translate this text to English
`#f` Traduire le résultat en français
`#i` Improve this text
`#s` Summarize this text
`#esp` Traduce el texto a castellano
